Grevedo

Phosphate Solubilizing Bacteria (PSB)

Grevedo is a unique bio fertilizer in powder form which contains Phosphorous Solubilizing Bacteria in high concentrations.

These bacteria colonize the soil and release organic acids which unlock the fixed phosphorous in the soil. Grevedo is applied through flood irrigation.

Ensures Better Root Development

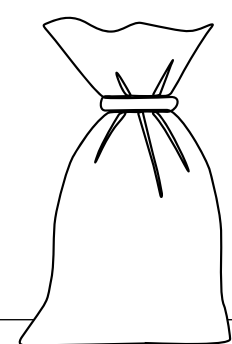

Benefits

- The use of Phosphate Solubilizing Bacteria as inoculants increases P uptake by the plant.
- The strain of PSB available in the product is local and therefore its performance is significantly better.
- It is especially useful for short-duration crops like vegetables and flowers which have a short window for the uptake of Phosphorous.
- Ensures better root development and therefore increases the ability of the plant to draw more nutrients from the soil.

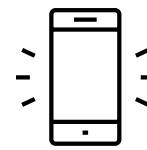

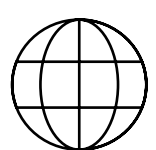

Chemical Analysis

- It contains Phosphate solubilizing bacteria *Bacillus Megatherium* var *Phosphaticum*.
- Viable cell count of ... CFU min. 10^7 cells/gms.
- pH 6.5 - 8.5

Available in **2 Kg**
