

Vibrant

**Hummic 10% Potash 3.5
fertility and crop yield**

پاکستان کے رنگ۔ وائٹل ایگری کے سنگ

Potassium Humate is an efficient organic and potassium-based soil amendment. It improves soil structure by improving the net negative charges thereby increasing the porosity of the soil. Vibrant is a chelating agent that binds the mineral (such as Iron, Zinc, Copper etc.) in the soil and delivers them to the plant. It can be mixed with urea, and phosphorous fertilizers to enhance their use efficiency. Vibrant application is recommended at earlier stages of crop growth. By increasing soil porosity, it enables robust root growth. The typical application rate is 3 litres per acre.

Chemical Analysis

Vibrant

Chemical Properties

Humic Acid	10 %
------------	------

Potassium as (K_2O)	3.5%
-------------------------	------

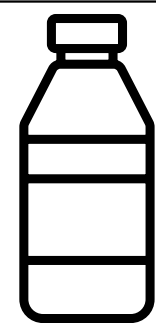

Physical Properties

Appearance/Shape	Liquid
------------------	--------

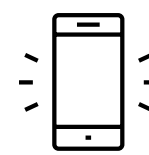

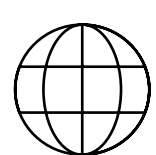

Color	Black to Dark Brown
-------	---------------------

pH (1% Solution @ 25 °C)	8.5 - 9.5
---------------------------	-----------

Available in **8** Liter | **20** Liter | **200** Liter
